ABOUT ME

Final-year Electronics and Communication Engineering student with strong interest in automotive electronics and embedded systems. Hands-on experience in microcontroller-based system design, sensor integration, EEPROM data handling, and hardware testing through academic projects. Proficient in Embedded C, Arduino, ESP32, and MATLAB, with exposure to secure system design and power-efficient solutions. Seeking Graduate Engineer / Embedded Electronics roles in automotive R&D environments.

EDUCATION

2022-26	Srinivas Institute of Technology,Mangaluru Bachelor of Engineering, Electronics&communicationEngineering	7.0/10
2022	12th (Senior Secondary Examination) The Kerala Board of Public Examinations	85%
2020	10th (Secondary Examination) The Kerala State Board of Public Examinations	95%

ACADEMIC PROJECTS

Sept-Dec'24

SMART DUSTBIN FOR CLEAN & GREEN TECHNOLOGY

5TH SEMESTER MINI PROJECT (NOV 2024)

- Developed a smart dustbin system using ESP32 microcontroller equipped with PIR and Ultrasonic sensors to detect motion and proximity within a 50-meter range. Integrated ESP32-CAM to capture images of improper waste disposal for real-time monitoring and record-keeping. Incorporated solar power for sustainable energy supply and DFPlayer Mini module for audio prompts, delivering real-time reminders to encourage correct waste disposal. Led sensor calibration, power optimization, and functional testing to ensure reliable performance and smooth integration of all components.
- Prepared detailed reports and testing documentation for the system

Feb-Dec'25

FINGERPRINT-BASED VOTING SYSTEM WITH LIVE STATISTICS AND SECURE RESULT STORAGE

FINAL YEAR MAJOR PROJECT (MAY 2025)

- Developed a secure, offline voting system using Arduino Uno and R307 fingerprint sensor to ensure biometric-based voter authentication and eliminate duplicate voting. Integrated 16x2 LCD for real-time display of live voting statistics, including total votes cast, gender-wise vote count, and candidate-wise distribution. Implemented EEPROM-based data storage to securely retain voting data and prevent data loss, with admin-controlled access for result retrieval.
- This project involved explaining system usage to team members, improving my ability to teach technical concepts clearly

INTERNSHIPS & TRAININGS

- Ten weeks Embedded system developer virtual internship training & certification (Microchip)

CLIENT & COMMUNICATION EXPERIENCE

- Delivered sessions and presentations during college events.
- Conducted project explanation and training for juniors.
- Strong documentation habit for tracking issues, testing, and reporting.
- Experience handling clients through startup (Nirmiti Studio) projects.

TECHNICAL SKILLS

- Embedded Systems: Arduino, ESP32
- Programming: Embedded C, C++
- Communication Protocols: UART, SPI, I2C
- Sensors: PIR, Ultrasonic, Fingerprint, Camera
- Memory: EEPROM
- Power Electronics: Linear Regulators, DC-DC Converters
- Tools: MATLAB (Signal Processing basics)

LANGUAGES KNOWN

- English
- Hindi
- Kannada
- Malayalam

ACHIEVEMENTS

- Participated and got selected in SIH Hackathon 2024-25
- Having Own Startup in college “Nirmiti Studio” working on graphic Design, video making, poster editing, visual effect
- Recognized as Guest Speaker for delivering a session on Problem-Solution Fit and Product-Market Fit at Srinivas Institute of Technology, Feb 2025
